

DEPARTMENT OF ENERGY**Office of Science; Biological and Environmental Research Advisory Committee Renewal****AGENCY:** Department of Energy.**ACTION:** Notice of renewal.

SUMMARY: Pursuant to Section 14(a)(2)(A) of the Federal Advisory Committee Act, and in accordance with section 101-6.1015(a), title 41 of the Code of Federal Regulations, and following consultation with the Committee Management Secretariat, General Services Administration, notice is hereby given that the Biological and Environmental Research Advisory Committee has been renewed for a two-year period beginning in November 1999. The Committee will provide advice to the Director, Office of Science, on the Biological and Environmental Research Program managed by the Office of Biological and Environmental Research.

The renewal of the Biological and Environmental Research Advisory Committee has been determined to be essential to the conduct of the Department of Energy business and to be in the public interest in connection with the performance of duties imposed upon the Department of Energy by law. The Committee will operate in accordance with the provisions of the Federal Advisory Committee Act, the Department of Energy Organization Act (Public Law No. 95-91), and rules and regulations issued in implementation of those Acts.

Further information regarding this Advisory Committee can be obtained from Mrs. Rachel M. Samuel at (202) 586-3279.

Issued in Washington, DC on November 22, 1999.

James N. Solit,*Advisory Committee Management Officer.*

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY**Notice of Floodplain and Wetlands Involvement for the Weldon Spring Site****AGENCY:** Office of Environmental Management, DOE.**ACTION:** Notice of floodplain and wetlands involvement.

SUMMARY: The U.S. Department of Energy (DOE) is proposing to construct a groundwater interceptor trench near the Weldon Spring Site, located in St. Charles County, Missouri. The groundwater interceptor trench would

collect contaminated groundwater for treatment at the Weldon Spring Quarry water treatment plant. The proposed trench is adjacent to two wetland areas and is located within the Missouri River 100-year floodplain. In accordance with 10 CFR part 1022, DOE is preparing a floodplain and wetlands assessment and will perform this proposed action in a manner so as to avoid or minimize potential harm to or within the affected floodplain and wetlands.

DATES: Comments are due to the address below no later than December 14, 1999.

ADDRESSES: Comments should be addressed to Mr. Steve McCracken, U.S. Department of Energy, Weldon Spring Site Remedial Action Project, 7295 Highway 94 South, St. Charles, MO 63304. Comments may be faxed to (636) 447-0739.

FOR FURTHER INFORMATION ON THIS

PROPOSED ACTION, CONTACT: Mr. Steve McCracken, U.S. Department of Energy, Weldon Spring Site Remedial Action Project, 7295 Highway 94 South, St. Charles, MO 63304, (636) 441-8978.

FOR FURTHER INFORMATION ON GENERAL**DOE FLOODPLAIN/WETLANDS****ENVIRONMENTAL REVIEW REQUIREMENTS,**

CONTACT: Carol M. Borgstrom, Director, Office of NEPA Policy and Assistance, EH-42, U.S. Department of Energy, 1000 Independence Avenue, SW, Washington, DC 20585, (202) 586-4600 or (800) 472-2756.

SUPPLEMENTARY INFORMATION: The DOE is conducting response actions at its Weldon Spring Site under the direction of the DOE Office of Environmental Management. The Weldon Spring Site is located in St. Charles County, Missouri, approximately 48 km (30 miles) west of St. Louis. Cleanup activities at the site include the remediation of the Weldon Spring Quarry. The quarry, approximately 3.9 km (2.5 miles) southwest of the site, was used for the disposal of chemically and radioactively contaminated materials between the 1940s and 1960s. Removal of bulk waste from the quarry was completed in October, 1995, however, elevated levels of uranium occur in groundwater in the vicinity of the quarry. The St. Charles County wellfield, a source of domestic water for the county, is located in the Missouri River floodplain southeast of the quarry. To limit potential exposure to the public, the Record of Decision for Remedial Action for the Quarry Residuals Operable Unit of the Weldon Spring Site outlined field studies for evaluating the effectiveness of technologies to remediate uranium-impacted groundwater in the vicinity of the Weldon Spring Quarry. This action is intended to evaluate the effectiveness

of remediation through the extraction of contaminated groundwater from a groundwater interceptor trench.

The DOE is proposing to construct a 550-foot trench approximately 90 m (300 feet) south of the quarry. The trench would be located between the Katy Trail and Femme Osage Slough, within the State of Missouri Weldon Spring Conservation Area, and approximately 1.4 km (0.88 mile) from the Missouri River. The groundwater interceptor trench would provide continuous groundwater access for an extraction system. Contaminated groundwater would be removed from the trench and directed to a treatment plant. The trench would be operated up to two years.

The proposed trench would be located adjacent to Femme Osage Slough, a palustrine, permanently flooded wetland. The area between the proposed trench and the slough contains a small palustrine, seasonally flooded wetland area. The trench would lie entirely within the 100-year floodplain of the Missouri River. Erosion controls would be installed down gradient from the construction site to prevent the transport of silt downstream by stormwater flows.

In accordance with DOE regulations for compliance with floodplain and wetlands environmental review requirements (10 CFR part 1022), the DOE is preparing a floodplain and wetlands assessment for this proposed action. After DOE issues the assessment, a floodplain statement of findings will be published in the **Federal Register**.

Issued in Oak Ridge, Tennessee on November 15, 1999.

James L. Elmore,*Alternate Oak Ridge Operations, National Environmental Policy Act Compliance Officer.*
